

Just Tip, Dump, and Clean

Lactating cows drink between 30 U.S. gallons (113 liters) to 50 U.S. gallons (189 liters) of water a day, and double that during heat stress periods.

This means it's critical to the health and wellbeing of your herd to have easy, consistent access to fresh and clean water.

VES-Artex dump-able water troughs make providing clean and fresh water fast and efficient.

BENEFITS

- Cows with access to higher quality water will drink and eat more resulting in healthier animals that produce more milk
- Traditional water troughs are cumbersome and difficult to clean. VES-Artex troughs are designed to make cleaning fast and efficient: just dump and refill
- Dry matter intake is a critical component for the success of high-performance cows. Dry matter intake is directly tied to water intake; a drop in water intake has been shown to reduce productivity by up to 20%

FEATURES

- Dump-able for quick and easy cleaning
- Easy access hood design for fast, efficient maintenance
- Standard sizes 4' (1.2m), 6' (1.8m), 8' (2.4m), 10' (3.0m), and 12' (3.6m)

OPTIONS

- High volume float valve
- Leg extension options
- Custom sizing available
- Standard and low volume depths available
- Fully hot dip galvanized and stainless-steel options

WARRANTY

- 2-year pro-rated warranty
