## Positive Pressure Tube Systems

### An Added Kick to Your Ventilation Strategy

Sometimes one strategy isn't enough. Positive Pressure Systems are designed to give your freestall barn, calf barn, parlour, or holding area that extra kick needed to keep air clean and fresh for every cow in your barn.

Used in large tunnel and cross vent facilities Positive Pressure Tube Systems inject fresh, clean air partway through the barn to maintain good air quality as it travels through the building. It can be used all year round or as part of a winter ventilation strategy, then folded up so it is out of the way during the summer months.

VES-Artex works with producers to develop customer Positive Pressure and calf barn ventilation strategies that are crafted to meet their individual needs. We work with you to ensure your system complements your existing ventilation strategy and cooling strategy.
