

Flip-Over Gates

Versatile Cow and Facility Management

The VES-Artex Flip-Over Gate System is ideal for closing off pens, packs, cross-overs, and traffic lanes where mounting other VES-Artex gates is difficult or not an option. This system gives farm managers greater flexibility to manage cow flow while maintaining the highest level of cow comfort.

Packs and Pens: Flip-Over Gates can be installed the full length of a pen between the bedding pack and the scrape alley, replacing fixed fence panels.

It allows you to choose any gate as the entry or exit point. You can make a pen within the pack eliminating the need for standard gates while giving you the option to have a pen in the middle for self-feeding or calf containment.

Cross-Overs: When installed in cross-overs, VES-Artex Flip-Over Gates allow operators to close these areas off and open them as needed when moving cows to and from the pen.

They create one-way traffic lanes that prevent cows from escaping via the cross-over, reducing the stress of chasing for both animals and workers.

"VES-Artex Flip-Over Gates are very handy; they're a space saver and easy to operate. They are always a conversation piece during tours."
